

GABOR SZAKAL

FIRM

Gabor M. Szakal Consulting Engineers (GMS) provides creative, design-oriented MEP engineering services for a broad range of project types. From commercial office towers and institutional buildings to commercial and residential interiors, his full-service engineering firm thrives on technical challenges. Examples are a mission critical IT facility for an international investment banking firm, a sophisticated precious metal recovery system for Rolex, and the specialized environmental systems required for a recording studio and video editing facility.

Gabor Szakal established his firm in 1995 to offer hands-on service, from the principal level down, to architects and designers who make design a priority. By staying personally involved through the life of the project, Gabor can support the architect's design intent with innovative, yet practical, engineering solutions. Offering expertise in both large- and small-scale projects, GMS has collaborated with such high-end interior designers as The Croxton Collaborative, Clodagh and William Sofield, and with such major building architects and corporate designers as Fox & Fowle and Mancini Duffy.
